"A Total Monitoring Solution"

- **Remote Terminal Unit (RTU)**
  Discrete, IP rated RTU used to remotely communicate events and alarms off-site.
  Typically, no external supply is required, the Micro's battery is charged from the current loop.
  As standard the Micro has one 4-20mA analogue input and integral temperature sensor. Voltage and digital input options are available.

- **Data Centre Services**
  Our Sitewatch servers manage the data from your sites and automatically post the level information onto your secure password protected Web pages. Our service provides you complete protection, by sending Email and Text alerts 24/7.

- **Project Management and Installation**
  We have an experienced team of engineers to manage your project, from system design to the installation and final handover.
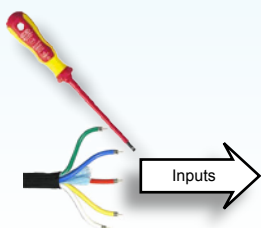

- **Support**
  We can provide you with short or long term support contracts plus *on* or *off-site* training of your own employees.

Site Signals

Remote Terminal Unit transmits your data Off-Site. RTU can read Analogue and Digital signals.

Inputs

Physical terminations to Analogue and Digital input circuits.

Monitoring
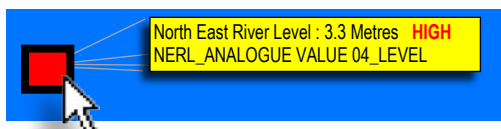

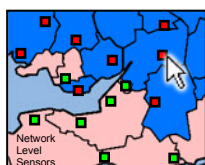

RTU supports SMS and mobile data (GPRS)

Internet / SMS

Your own secure, password protected Web pages. Graphical status and history displayed.
